The SMARTDG browser interface offers real-time remote operating and monitoring of the following functions:

1. On/off power switches for the unit, fans and heating and cooling functions (for heating and cooling units only)
2. Relative humidity and temperature levels
3. Modify relative humidity and temperature set points
4. Dew point and VPD monitoring
5. Estimated hourly average Water removal rate (Optional)
6. Incoming water temperature monitoring for heating and cooling functions
7. Monitor compressor operation and accumulative runtime

Additionally, use the 'Technical Zone' to collect and view data to improve cultivation and unit maintenance.
